Last updated: Feb 13, 2026

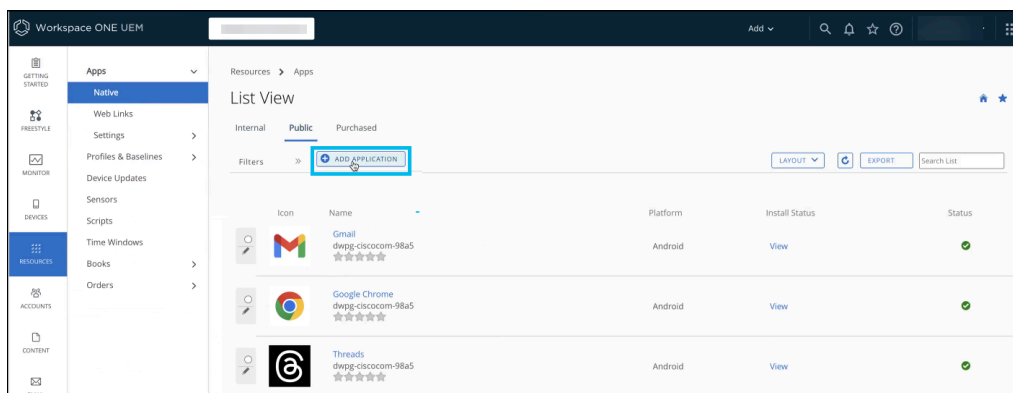

Add and Publish the Cisco Secure Client Application

Procedure

- 1 In the **Workspace ONE UEM** console, navigate to **Resources > Native > Public**.

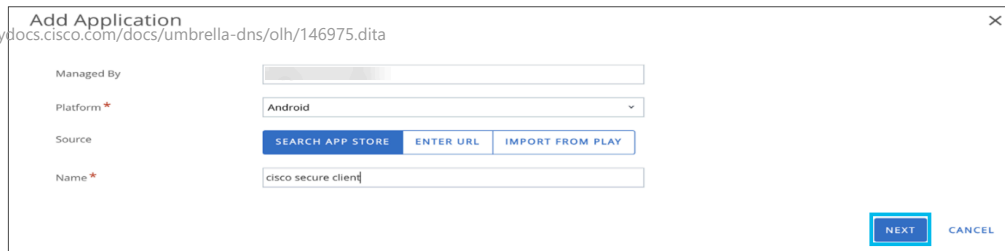

- 2 Click **Add Application**.

- 3 To add the **Cisco Secure Client** application, provide the following details:
 - The **Manage By** field is automatically filled based on how you set up the application management.
 - From the **Platform** drop-down list, choose **Android**.
 - In the **Source** field, select **SEARCH APP STORE** to search for the application in the app store.
 - In the **Name** field, enter *Cisco Secure Client* and click **Next**.

Google Play is launched.

- 9 In the left pane, click **Restrictions**.

- 10 In the **Restrictions** page, click the **Managed Access** toggle button to allow only EMM-managed devices to install the application.

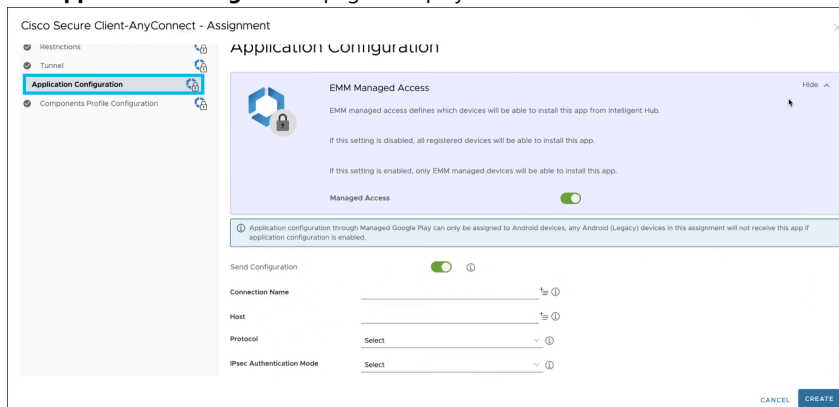

- 11 In the left pane, click **Tunnel**.
- 12 In the **Tunnel** page, from the **Android (Custom DPC)** drop-down list, choose the **Always On VPN** profile created earlier.
- 13 This enables the **Always On VPN** profile for the managed devices.

- 14 In the left pane, click **Application Configuration**.

The **Application Configuration** page is displayed.

- 15 In the **Application Configuration** page, provide values, including the following:
 - Leave the **Host** field empty because as the server details are taken from the profile.
 - From the **Accept SEULA For Users** drop-down list, choose **Enable** to prevent users from manually accepting the SEULA banner.
 - From the **Enable Always On VPN Mode for Umbrella Protection Only** drop-down list, choose **Enable** to allow the Cisco Secure Client application to automatically manage Umbrella protection and seamlessly accept VPN connection requests when Umbrella protection is activated.
 - From the **Block users from creating new VPN connections** drop-down list, choose **Enable**.
 - Enter the application configuration details, such as, **Umbrella Organization Id** and **Umbrella Registration Token**, by referring to the **Android Config File** downloaded from the Umbrella dashboard. For more information on how to download **Android Config File**, see [Android Configuration Download](#).
